SUMMARY

Cloud-focused Computer Science Engineering student with hands-on experience in AWS, full-stack development, and AI-powered applications. Skilled in architecting and deploying scalable web applications using Flask, Node.js, Docker, and MongoDB. Demonstrated ability to develop data-driven solutions, improve user engagement, and work with cloud-native technologies. Seeking opportunities to contribute to real-world cloud and backend systems.

EDUCATION

Ganpat University

B.Tech CSE with specialization in Cloud-Based Applications

Kherva, IN

2023 – 2026

Government Polytechnic

Diploma in Electronics and Communication

Ahmedabad, IN

2018 – 2021

EXPERIENCE

Cloud Internship

Jan 2026 – April 2026

Grras IT Solution

Ahmedabad, IN

- Gained hands-on experience with core AWS services, including EC2, S3, IAM, Lambda, Auto Scaling, and Elastic Load Balancing
- Implemented Auto Scaling to ensure high availability and fault tolerance of applications
- Configured AWS Elastic Load Balancer to distribute traffic efficiently across multiple EC2 instances
- Hosted a static website using Amazon S3 with proper configuration and public access control
- Configured monitoring and alerting using Amazon CloudWatch integrated with SNS for real-time notifications
- Architected a highly available and scalable three-tier Node.js application architecture on AWS
- Applied security best practices using IAM roles, policies, and secure network configurations
- Worked with AWS Lambda for serverless execution of event-driven tasks

Summer Intern

June 2024 – July 2024

IBhavan

Ahmedabad, IN

- Completed a hands-on internship focused on AWS cloud services and deployment workflows
- Implemented and demonstrated cloud-based projects, improving understanding of real-world cloud architectures
- Gained practical experience with AWS services, deployment pipelines, and cloud fundamentals
- Earned AWS Cloud Practitioner Certification, validating foundational cloud knowledge

PROJECTS

Three-Tier Scalable Node.js Application Deployment on AWS | AWS

Jan 2026 - April 2026

- Architected a highly available and scalable three-tier Node.js application on AWS using EC2, VPC, and RDS
- Designed Web (React), Application (Node.js), and Database (MySQL) layers with secure network isolation
- Used Load Balancer and Auto Scaling for high availability and scalability.
- Configured CloudWatch and SNS for monitoring and alerts

Auto Scaling Implementation | AWS

Jan 2026 - April 2026

- Configured **Auto Scaling Groups (ASGs)** to ensure high availability and fault tolerance for applications
- Configured dynamic scaling policies based on demand to optimize performance and cost
- Created and maintained **Launch Templates** with secure configurations for consistent instance provisioning
- Automated EC2 instance setup using **user data scripts** for seamless bootstrapping
- Improved system reliability by enabling automatic instance replacement and load balancing integration

AWS Load Balancer Implementation | AWS

Jan 2026 - April 2026

- Configured **Application Load Balancers (ALB)** to distribute traffic across multiple EC2 instances.
- Enhanced application availability and reliability through efficient load-balancing strategies

- Integrated ALB with **Auto Scaling Groups (ASG)** for automatic scaling and fault tolerance
- Ensured seamless traffic routing and minimized downtime during traffic spikes

Static Website Hosting on AWS S3 | AWS

Jan 2026 - April 2026

- Hosted a static website using **Amazon S3**, ensuring a cost-effective and scalable hosting solution
- Configured **S3 bucket policies** to enable secure and controlled public access
- Enabled **object versioning** for efficient content management and recovery
- Optimized static content delivery with high availability and durability
- Organized website assets (HTML, CSS, JS) with structured storage and access control

CloudWatch with SNS and Alarm Configuration | AWS

Jan 2026 - April 2026

- Created **Amazon CloudWatch dashboards** to monitor EC2 instance metrics such as CPU utilization
- Configured **CloudWatch alarms** to detect high CPU usage and trigger automated alerts
- Integrated **Amazon SNS** for real-time email notifications on threshold breaches
- Improved system monitoring, scalability, and proactive issue resolution
- Enabled efficient performance tracking and reduced downtime through alerting mechanisms

Cloud-Based MNIST Digit Classification & Analytics Platform

| AWS, FastAPI, React, TensorFlow, PostgreSQL

Jan 2026 - April 2026

- Architected and deployed a secure three-tier cloud application for handwritten digit recognition and analytics on AWS.
- Configured VPC networking, Security Groups, Application Load Balancer, Auto Scaling Groups, and Amazon RDS for scalable and highly available deployment.
- Developed REST APIs using FastAPI for digit prediction, user management, authentication, and analytics reporting.
- Created interactive analytics dashboards to visualize prediction frequency, confidence metrics, user activity, and model performance.
- Secured the platform using JWT authentication, role-based authorization, password policies, and controlled API access.
- Implemented CNN-based digit classification with OpenCV preprocessing and confidence tracking.

Fitness Tracker | Python, Flask, HTML, CSS, MongoDB, Docker

June 2024 – July 2024

- Built a full-stack web application using **Flask, Python**, with **MongoDB**, enhancing user experience
- Designed an admin interface allowing administrators to dynamically add and manage users' daily tasks
- Created a data visualisation system leveraging GitHub metrics to track team engagement and code contribution growth
- Created a Fitness Tracker app to automate tracking of daily routines and workouts, boosting user engagement and health insights

Image Colorization using deOldify | Python, Git

September 2024

- Implemented a Flask-based website integrating neural networks for automated image colorization, achieving 90 percent accuracy on test datasets
- Maintained Git-based repositories for an AI-powered image colorization system

TECHNICAL SKILLS

Cloud Computing: AWS (EC2, S3, VPC, IAM, Route 53, RDS, CloudWatch, SNS, Lambda, Auto Scaling, Load Balancer)

Programming Languages: Python, SQL, JavaScript, C, C++

Frontend Technologies: React.js, HTML5, CSS3

Backend Technologies: Node.js, Express.js, Flask, FastAPI

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Amazon Aurora

DevOps & Containers: Docker, Kubernetes, CI/CD Fundamentals, GitHub Actions

Networking & Security: DNS, HTTP/HTTPS, VPC Networking, Security Groups, Load Balancing

Machine Learning & Analytics: TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Matplotlib, OpenCV

Tools: Git, GitHub, VS Code, Postman, MobaXterm

CERTIFICATION

AWS Cloud Quest: Cloud Practitioner - AWS Skill Builder

AWS Cloud Quest: AWS Technical Essentials - AWS Skill Builder

Digital Course: AWS Cloud Practitioner Essentials - AWS Skill Builder
